

Stakeholder Requirements Document: Cyclistic Station Dashboard

BI Professional: Rufat Aghagasimov

Client/Sponsor: Jamal Harris, Director, Customer Data

Business problem: How were bikes used by our customers? How can we apply insights from the data generated by trip data? The top priority is identifying customer demand at different station locations to inform new station growth and increase Cyclistic's customer base

Stakeholders:

- Sara Romero, VP, Marketing
- Ernest Cox, VP, Product Development
- Jamal Harris, Director, Customer Data
- Nina Locklear, Director, Procurement

Stakeholder usage details: Stakeholders will use this tool to understand how the current line of bikes are used, how can we apply customer usage insights to inform new station growth and how new stations might alleviate demand in different geographical areas for better customers' satisfaction

Primary requirements:

- A table or map visualization exploring starting and ending station locations, aggregated by location. I can use any location identifier, such as station, zip code, neighborhood, and/or borough. This should show the number of trips at starting locations.
- A visualization showing which destination (ending) locations are popular based on the total trip minutes.
- A visualization that focuses on trends from the summer of 2015.
- A visualization showing the percent growth in the number of trips year over year.

- Gather insights about congestion at stations.
- Gather insights about the number of trips across all starting and ending locations.
- Gather insights about peak usage by time of day, season, and the impact of weather.
